Software validation report

Record of the validation of the data-processing software before use and after changes (ISO/IEC 17025:2017 7.11.2). Every reference example is recomputed from its inputs and compared with the published values within a documented tolerance.

Software	KAPSAM
Version	0.1.1 (commit 106a6f306436, 2026-11-12)
Compiler	rustc 1.97.0 (2d8144b78 2026-07-07)
Platform	linux x86_64
Date	2026-11-12
Options	Monte Carlo evaluations included (fixed seeds and numbers of trials as stored in the files)
Digest of the checked files	5eeceed597012a5e7fc866cf4ef7936620dde6052c2960fe44af19dc9db40457 (SHA-256 of the sorted list "SHA-256 file" of all checked files; each file holds its inputs, reference values and settings (seeds, numbers of trials, rounding))

Summary

284 project files and 1841 compared values. Passed: 284; failed: 0; without reference values: 0.

All reference values are reproduced within their tolerances.

Results by method

The column max |Δ|/tol gives the largest ratio of the difference between computed and reference value to its tolerance in the file (≤ 1 passes). The tolerances reflect the rounding of the published values; for Monte Carlo results they add about five times the dispersion of the result over seeds, so that the comparison holds for other seeds as well (research log D15, D110).
