LIBRARY
ENGINE
USE
38 documents
GUM suite, Eurachem, Nordtest, EA, UKAS, EURAMET, ISO, NIST
Generators
Python scripts: the numbers and clause of each example
286 projects
JSON: inputs, sources and reference values ± tolerance
run
compare with the printed results
KAPSAM engine · Rust
one engine for every interface, so that all give the same numbers
GUM, LPU
JCGM 100
Monte Carlo
JCGM 101
Several outputs
JCGM 102
Conformity
JCGM 106
Top-down
Nordtest, MUPR
Proficiency
ISO 13528
Calibration
ISO 6143
Precision
ISO 5725
Control charts
Nordtest TR 569
Sampling
Eurachem UfS
Weighing
EURAMET cg-18
Consensus
NIST NICOB
each report names version, commit and SHA-256 of the project
recompute
Command line
kapsam run, kapsam check; validation report (17025)
Application
Windows, Linux, macOS, Android, iOS; guide, library
Reports, EN and TR
Markdown, HTML, PDF, JSON; spreadsheet workbook (.xlsx)
VALIDATION
EVERY CHANGE (CI)
1865
reference values of 286 projects, all within their tolerances
RELEASE BENCHMARK
171
projects reproduced by an independent program (Suncal)
EVERY CHANGE (CI)
189
spreadsheet workbooks, 4678 values (LibreOffice)
RELEASE BENCHMARK
8 × 10⁶
Monte Carlo draws through the fit of 8 calibrations (ISO 6143)
